The Approach

A growing number of our investors seek to align their investments with their personal values.

Our High Impact Portfolios (HIP) invest in companies and funds that are committed to sustainable business practices. There is a growing base of evidence that suggests companies that are environmentally sustainable, socially responsible, and have positive screens for corporate governance and diversity in executive leadership (ESG) outperform funds that do not share this focus¹.

Strategy Objectives

Long-term – focus on performance through full market cycles seeking competitive risk-adjusted returns.*

Active and passive strategies including individual stocks, mutual funds, and ETFs are screened for social responsibility, corporate governance, and environmental factors.

Ideal Investor

The High Impact Portfolio Models are ideally suited for investors seeking to maximize the benefits of both active and passive investments.

Ideal investors have an additional affinity for companies with a good track record of environmental focus, social responsibility and corporate governance.

Tax Conscious

Individual client portfolio holdings can be customized to meet investment objectives of tax-conscious investors.

There is no assurance that any strategy assures success, protects against loss, or is suitable for all investors. Investing involves risks including loss of principal.

An investment in ETFs involves risks such as not diversified, price volatility, competitive industry pressure, international political and economic

developments, possible trading halts, and index tracking errors.

Fixed income investments are subject to market and interest rate risk if sold prior to maturity. Their values will decline as interest rates rise and they are subject to availability and change in price.

Investing in mutual funds involves risk, including possible loss of principal.

Investing in stock includes numerous specific risks including: the fluctuation of dividend, loss of principal and potential illiquidity of the investment in a falling market. The payment of dividends is not guaranteed.

The return on ESG investments may be lower than if the adviser made decisions based solely on investment considerations.
